

ABSTRACT OF THE DISCLOSURE

The pipette tip packaging and transfer system comprises a plurality of receiving plates and a transfer member. Each receiving plate includes a plurality of openings for receiving pipette tips in a substantially vertical alignment at a medial position thereof.

5 The loaded receiving plates can be stacked one atop of another with the pipette tips contained within a first receiving plate being received in the top openings of the aligned pipette tips contained within the underlying receiving plate of the stack. The transfer member has a plurality of projections extending from the bottom surface of the transfer member at positions that correspond to the location of the openings of the receiving
10 plate. The projections are configured and arranged to extend into the top openings of the pipette tips on the upper-most receiving plate and maintain the pipette tips in a fixed and substantially perpendicular alignment in relation to the transfer member and receiving plate. The pipette tip packaging and transfer system can further include a container or box which is sized to receive and securely hold the pipette tip packaging
15 and transfer assembly.
